## Spring - 2

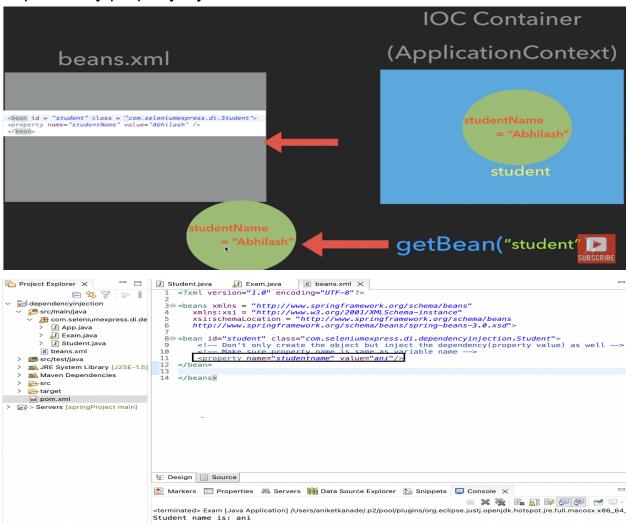

## 1. Basic setup:

```
Project E X
                        k beans.xml
                          package com.seleniumexpress.di.dependencyinjection;
      E S T
                             public class Student
{
  dependencyinjection
     src/main/java
                                  private String studentname;
       teniumex ...
                          6
7⊜
8
          App.java
                                  public String getStudentname() {
    return studentname;
         Exam.java
Student.java
                                  }
       k beans.xml
                                  public void setStudentname(String studentname) {
   this.studentname = studentname;
     src/test/java
                          11⊜
